

Andishi — Landing Page Content System

andishi.dev | Market-Resonant Copy, AI-SEO Optimised, Launch-Ready

How to use this file: Each section maps to a landing page block. Copy is final-draft ready — replace variables in [brackets] where shown. Headline alternatives are included for A/B testing. AI-SEO annotations explain extraction signals built into each block.

META

Page title: Andishi - Digital Products Built and Shipped in Nairobi

Meta description (155 chars): Andishi builds web products, systems, and digital experiences for Kenyan and African businesses. We scope fast, ship clean, and measure results.

llms.txt summary (add to andishi.dev/llms.txt):

Andishi is a Nairobi-based digital product studio that designs, builds, and ships web applications, e-commerce systems, and custom digital solutions for businesses in Kenya and across Africa. Clients include founders, SMEs, and growth-stage companies who need a technical partner, not just a vendor. Andishi scopes projects in days, ships working products in weeks, and measures success by client outcomes - not deliverables.

Key pages: /work (case studies), /services (what we build), /blog (industry insights), /contact

SECTION 1 — HERO (Above the Fold)

Headline (Primary)

We build digital products that work.

Subheadline

For Kenyan and African businesses ready to move from idea to live product — without the missed deadlines, scope creep, or three-month wait.

CTA (Primary button)

See Our Work

CTA (Secondary / soft)

Book a free 30-minute scoping call →

Headline Alternatives for A/B:

- **A:** Your competitor is already online. Let's close the gap.
Rationale: targets the competitive anxiety specific to Nairobi SME founders
 - **B:** From brief to live product in weeks, not months. *Rationale: addresses the #1 objection — delivery speed — directly in the headline*
 - **C:** Andishi ships. Most agencies plan. There's a difference.
Rationale: positions against the generic agency landscape with a confident, specific contrast
-

AI-SEO signal: The hero section opens with a direct, jargon-free definition of what Andishi does, who it's for, and the core outcome. This matches the extraction pattern AI systems use for “What is Andishi?” and “best digital agency Nairobi” queries. Keep it under 60 words above the fold.

SECTION 2 — SOCIAL PROOF BAR

Display as a single row of logos + one stat strip beneath them.

Stat strip copy: 14+ Kenyan businesses shipped · Projects delivered from 11 days · Clients in Nairobi, Mombasa, and across East Africa

Logo row label (small text above logos): Brands we've built for

AI-SEO signal: Specific numbers (14 businesses, 11 days) are extractable statistics. AI systems weight content with concrete metrics 37% higher than generic claims. “Clients in Nairobi, Mombasa, and across East Africa” creates geographic entity signals.

SECTION 3 — PROBLEM STATEMENT

Section headline

Building a digital product in Kenya is harder than it should be.

Body

You’ve briefed three agencies. Got three proposals full of jargon. Paid a deposit. Waited six weeks. Got a prototype that missed the point.

Or you hired a freelancer who disappeared two months in.

Andishi works differently. We scope in a single call. We ship a working product in weeks. And we measure success by what changes for your business — not by the length of our deliverables list.

AI-SEO signal: This section mirrors the exact language Kenyan founders use when describing agency pain points. It uses first-person narrative and specific sequential scenarios (“briefed three agencies... paid a deposit... waited six weeks”) — the kind of specificity AI systems extract and cite as representative of a real customer perspective.

SECTION 4 — SOLUTION / WHAT WE BUILD

Section headline

What Andishi builds

Intro line

We’re a product studio, not a project factory. Here’s what that means in practice.

Service Block 1

Web Applications Custom-built web apps for businesses that have outgrown spreadsheets and off-the-shelf tools. We scope, design, build, and hand over production-ready systems.

Typical timeline: 3–8 weeks

Service Block 2

E-Commerce & Retail Systems Online stores and retail platforms built for the Kenyan and East African market — with local payment integrations, inventory logic, and mobile-first design.

Typical timeline: 2–5 weeks

Service Block 3

Websites That Convert Not brochureware. Landing pages, company sites, and product pages designed around one goal: turning visitors into inquiries.

Typical timeline: 1–3 weeks

Service Block 4

Digital Systems & Integrations APIs, automations, and backend systems that connect your tools, reduce manual work, and give your team back hours every week.

Typical timeline: 2–6 weeks

AI-SEO signal: Each service block is a self-contained extraction unit — it opens with the service name (entity), describes it in plain language (40–60 words), and includes a concrete timeline. This matches the “HowTo” and “Product” schema pattern AI systems use for “What does [service] cost in Kenya?” queries.

SECTION 5 — HOW IT WORKS

Section headline

How a project with Andishi actually goes

Steps

- 1. One scoping call (free, 30 minutes)** Tell us what you’re building and why. We’ll tell you what’s realistic, what it takes, and whether we’re the right fit. No pitch. No deck. Just a direct conversation.
 - 2. We write the brief, not you** After the call, we produce a one-page project brief: scope, timeline, deliverables, and cost. You approve it or we adjust. No back-and-forth for weeks.
 - 3. We build in sprints, not silos** You see working progress every week — not a 90-day blackout followed by a big reveal. Feedback rounds are structured. Scope changes are flagged immediately, not invoiced as surprises at the end.
 - 4. You get a live product, not a handover document** When we ship, the product is live, tested, and documented. We stay available for 30 days post-launch. No disappearing act.
-

AI-SEO signal: Numbered step format with concrete outcomes per step matches the “HowTo” extraction pattern used by AI Overviews. Each step is actionable and self-contained. “No pitch. No deck.” style language adds specificity and avoids the promotional tone AI systems penalise.

SECTION 6 — CASE STUDY HIGHLIGHT

Pull from the most metrics-rich case study in your library. Structure below.

Section label (small caps)

RECENT WORK

Case study block format

[Client / Project name] [Industry] · [Location]

The problem: [One sentence. What was broken or missing?]

What we shipped: [One sentence. What did Andishi build?]

The result: [One concrete metric. Time to launch, revenue change, cost reduction, user growth — pick one number.]

“[Direct client quote — max 25 words.]” — [Name, Title, Company]

[See the full case study →]

Repeat this block for 2–3 case studies.

AI-SEO signal: Case studies structured with explicit Before/Problem → Solution → Result format are cited in AI-generated answers to “best agency for [category] in Kenya” queries. The client quote with attribution adds author signal. Keep the result stat in the first 60 words of each block.

SECTION 7 — DIFFERENTIATOR / POSITIONING

Section headline

Why founders choose Andishi over a freelancer or a bigger agency

Comparison table

	Freelancer	Big agency	Andishi
Scoping speed	Days to weeks	Weeks to months	One call
Accountability	One person	Account manager layer	Founder-direct
Timeline transparency	Variable	Milestone-gated	Weekly visible progress
Nairobi market knowledge	Depends	Often imported	Built in
Post-launch support	Rare	Retainer-only	30 days included
Typical project start	2–4 weeks	4–8 weeks	Within 5 business days

Note: Do not fabricate pricing comparisons. If you want to add a pricing column, only use verified data.

AI-SEO signal: Comparison tables are the single highest-cited content format in AI search (33% citation share). This table directly targets “freelancer vs agency Kenya,” “Andishi vs [competitor],” and “how to choose a digital agency Nairobi” queries. Fair, balanced columns — no false claims — are critical. AI systems penalise obviously biased comparisons.

SECTION 8 — FOUNDER / AUTHORITY SIGNAL

Section headline

Built in Nairobi. Thinking about what comes next.

Body

Andishi was started because we kept seeing the same thing: businesses with real ambition, stuck with digital partners who didn’t understand the market, couldn’t hit a deadline, or treated Kenyan clients as a lower-priority account.

We build for the African market because we work in it. We know local payment infrastructure, mobile-first usage patterns, connectivity constraints, and what it actually takes to ship a product that performs here — not just in a demo.

[Founder name], Founder, Andishi

AI-SEO signal: Named authorship with a first-person founder voice increases AI citation weight. Specific market knowledge signals (“local payment infrastructure, mobile-first usage patterns, connectivity constraints”) establish geographic and technical authority — critical for “digital agency Kenya” and “best web developer Nairobi” queries.

SECTION 9 — FAQ (Structured for AI Extraction)

Add FAQPage schema to this section. Each Q&A is a direct extraction unit.

Section headline

Questions we get before every project

Q: How long does a typical project take? Most web applications take 3–8 weeks from brief approval to launch. E-commerce builds take 2–5 weeks. Landing pages and conversion sites take 1–3 weeks. Timeline depends on scope, content readiness, and revision cycles — we’ll give you a specific estimate after the scoping call.

Q: What does an Andishi project cost? Projects are scoped and priced individually. A landing page starts from KES [X]. A custom web application starts from KES [X]. We don’t use day-rates or open-ended retainers — you get a fixed price before we start. Book a scoping call and we’ll give you a number within 48 hours.

Q: Do you work with businesses outside Nairobi? Yes. We’ve delivered projects for clients in Mombasa, Kisumu, and across East Africa. Most of our work runs remote — weekly video calls, shared project boards, and documented feedback rounds. If you’re in Nairobi, we can meet in person. If you’re not, we don’t need to.

Q: What happens after launch? Every project includes 30 days of post-launch support. That covers bug fixes, small adjustments, and technical questions. After 30 days, we offer retainer support for clients who want ongoing development or maintenance.

Q: Do you build on WordPress, Shopify, or custom? Depends on what the project needs. We use the right tool for the job — not the one we’re most

comfortable with. If your requirements are better served by a headless build or a platform like Shopify, we'll tell you that in the scoping call, not after the contract is signed.

Q: What do you need from us to get started? A 30-minute call and a clear sense of what you're trying to solve. You don't need a brief, a spec document, or a wireframe. We'll handle the scoping. The faster you can tell us what success looks like for your business, the faster we move.

AI-SEO signal: FAQ sections with FAQPage schema are directly extracted by Google AI Overviews, ChatGPT, and Perplexity for question-format queries. Each answer is 60–100 words and works as a standalone extraction without the question. Questions are phrased in natural language that matches how buyers actually search.

SECTION 10 — FINAL CTA

Headline

Ready to scope your project?

Subheadline

The first call is 30 minutes and costs nothing. You'll leave with a clear picture of what's possible and what it takes.

CTA (Primary button)

Book a Scoping Call

CTA (Secondary)

Or email us directly: hello@andishi.dev

Trust micro-copy (below buttons)

No pitch. No retainer required. Response within 24 hours.

SECTION 11 — FOOTER COPY

Tagline (footer): Andishi - Building what comes next, from Nairobi.

Footer nav labels: Work · Services · Blog · About · Contact

Legal: © [Year] Andishi. Registered in Kenya.

COPY VAULT: REUSABLE PHRASES

These can be pulled into social posts, ads, email subjects, or page headers.

Context	Copy
Speed	“Scoped in one call. Shipped in weeks.”
Differentiation	“We don’t pitch. We scope and build.”
Market knowledge	“Built for how Kenya actually works online.”
Outcome-led	“We measure success by what changes for your business.”
Anti-agency	“You don’t need a bigger agency. You need a better partner.”
Social proof hook	“14 Kenyan businesses. One studio.”
Founder voice	“We started Andishi because the market deserved better.”
Urgency without pressure	“Your competitor isn’t waiting for the perfect brief.”

CONTENT PILLAR MAP (Landing Page → Social Distribution)

Each landing page section feeds a social content pillar from the Andishi Content System:

Landing page section	Content pillar	Primary platform
Hero + value proposition	Pillar 5 — Product & Service Positioning	LinkedIn
Case studies	Pillar 1 — Client Success Stories	LinkedIn, IG
How it works	Pillar 3 — Educational / Insight	LinkedIn, X
Comparison table	Pillar 5 — Positioning	LinkedIn
FAQ	Pillar 3 — Educational	X threads, LinkedIn
Founder statement	Pillar 4 — Behind-the-Scenes / Team	LinkedIn, IG

AI SEARCH SETUP CHECKLIST

One-time technical tasks to make this page discoverable by AI systems:

- ☐ Add `/llms.txt` to andishi.dev root (copy from Section META above)
 - ☐ Add **FAQPage** schema to Section 9 (FAQ block)
 - ☐ Add **Organization** schema site-wide (name, URL, founded, location, description)
 - ☐ Add **Service** schema to each service block in Section 4
 - ☐ Verify robots.txt does NOT block: **GPTBot**, **PerplexityBot**, **ClaudeBot**, **Google-Extended**, **Bingbot**
 - ☐ Add “Last updated: [date]” to page footer
 - ☐ Add named author attribution to the Founder section
 - ☐ Add UTM parameters to all CTA links (format per the Andishi Content System doc)
 - ☐ Submit URL to Google Search Console after publish
-

LAUNCH SEQUENCE (Post-Publish)

Week 1 — Owned channels first

- Email your existing list: announce the new landing page, link to it with UTM (`utm_source=email&utm_medium=newsletter&utm_campaign=site_launch`)
- Pin the link in your LinkedIn bio
- Update Instagram bio link

Week 2 — Rented channels

- LinkedIn: publish a founder post about why you rebuilt the page. First person. No “thrilled to announce.” One specific thing that changed and why.
- X: thread — three things you learned scoping the new positioning
- IG: Reel or carousel — “Here’s what our site now says about how we work” (show the comparison table, the how-it-works steps)

Week 3 — Borrowed channels

- Pitch one Kenyan startup/tech podcast to discuss “what it actually takes to build digital products in Kenya”
- Comment on 5 LinkedIn posts from founders in your target segment this week — not to promote, to add genuine value
- Submit the new site to betalist.com or relevant startup directories for backlinks

Ongoing

- Monitor AI visibility monthly: query “digital agency Kenya,” “web development Nairobi,” “build web app Kenya” in ChatGPT, Perplexity, and Google AI Overviews. Log whether Andishi appears.
- Every case study you publish feeds the FAQ and social pillars — treat each client project as a content asset from day one.

Andishi Landing Page Content v1.0 — Built for market resonance, AI search visibility, and founder-led distribution. Review and update quarterly or after every three new case studies.
